# (57) ABSTRACT

Embodiments are described for displaying charging status on a multi-screen device. In embodiments, a determination is made that the device is connected to a power source for charging the battery. In response to the determination, a battery charging indicator is displayed. In some embodiments, if the device was originally powered off or in a standby mode, after a predetermined period of time, the device will be powered off or returned to the standby mode, and the battery charging indicator will no longer be displayed.
